## CONTENTS

### PART I : ARIDITY, GROUNDWATER RECHARGE AND WATER RESOURCES MANAGEMENT

<b>1 ARIDITY, GROUNDWATER RECHARGE AND WATER RESOURCES MANAGEMENT</b>	<b>3</b>
1.1 Definitions	4
1.1.1 Aridity	4
1.1.2 Groundwater recharge	6
1.2 Groundwater recharge processes	9
1.3 Recharge time and space variability	11
1.3.1 Extrapolation in time	12
1.3.2 Spatial extrapolation	13
1.4 Resource management implications	15
1.5 Recharge requirements for groundwater modelling	17
1.6 Conclusions	20

### PART II : REGIONAL HYDROGEOLOGICAL CONCEPTS

<b>2 HYDROGEOLOGICAL PROVINCES - INTRODUCTION</b>	<b>23</b>
<b>3 RIVERBED AND MOUNTAIN FRONT PROVINCES</b>	<b>27</b>
3.1 Riverbed basins	27
3.1.1 Physical controls on riverbed recharge	27
3.1.2 Summary of river recharge controls	29
3.1.3 Evaluation based on water balances	30
3.1.4 Examples from isotope studies	32
3.2 Mountain front basins	33
3.2.1 Examples from isotope studies	36
<b>4 SAND AND SANDSTONE PROVINCES</b>	<b>39</b>
4.1 Sand provinces	39
4.1.1 Examples	40
4.1.2 General conclusions	45
4.2 Sandstone provinces	47
4.2.1 The Great Artesian Basin, Australia	48
4.2.2 Eastern Sahara	49
4.2.3 Western Sahara	51
4.2.4 Saudi Arabia	52
<b>5 LIMESTONE AND DOLOSTONE PROVINCES</b>	<b>55</b>
5.1 Introduction	55
5.2 Examples	56
5.2.1 Tunisia	56
5.2.2 Middle East	57
5.2.3 Arabian Peninsula	58
5.2.4 South Africa	59
5.2.5 Zambia	66
5.2.6 South America	68
5.2.7 Australia	68
<b>6 CHALK PROVINCES</b>	<b>71</b>
6.1 The London Basin	71
6.2 Negev, Israel	73
<b>7 VOLCANIC PROVINCES</b>	<b>77</b>
7.1 Plateau basalts	77

7.1.1	The Deccan Trap basalts	77
7.1.2	Black cotton soils	81
7.1.3	Idaho basalts	82
7.2	Vesuvian type basalt terrain	83
7.2.1	Djibouti, Eastern Africa	83
<b>8</b>	<b>CRYSTALLINE PLUTONIC PROVINCES</b>	<b>85</b>
8.1	Granitic terrains	85
<b>9</b>	<b>A GENERAL PROCEDURE FOR RECHARGE ESTIMATION</b>	<b>89</b>
9.1	The context of recharge estimation	89
9.2	A procedure	91
9.2.1	Collect existing data	91
9.2.2	Remote sensing and reconnaissance	91
9.2.3	Conceptual hydrogeological model	91
9.2.4	Key features and data shortages	93
9.2.5	Comparable regions	93
9.2.6	Preliminary estimates of flows and properties	93
9.2.7	Planning field campaigns	93
9.2.8	Long term monitoring	94
9.2.9	Short term fieldwork	94
9.2.10	Initial numerical model	94
9.2.11	Finalising models	94
9.2.12	Water resource development plan	94
9.3	Example - Recharge discharge ratios in the Nubian Sandstone aquifer of the Dead Sea region	94
<b>PART III : TECHNIQUES</b>		
<b>10</b>	<b>GENERAL PRINCIPLES OF TECHNIQUES FOR ESTIMATING RECHARGE</b>	<b>101</b>
10.1	Introduction	101
10.1.1	Requirements of a recharge estimation method	101
10.1.2	Time intervals	102
10.1.3	General approach for estimating recharge	103
10.2	Direct measurements	103
10.3	Water balances	104
10.4	Darcian approaches	105
10.5	Tracer techniques	106
10.6	Other methods	106
10.7	Accuracy of recharge estimates	107
10.7.1	Types of error	107
10.7.2	Theory of errors	108
10.7.3	Minimising uncertainty in recharge estimates	109
<b>11</b>	<b>PRECIPITATION RECHARGE</b>	<b>111</b>
11.1	Introduction	111
11.1.1	Direct and indirect recharge	111
11.1.2	Methods for estimating direct recharge	112
11.2	Lysimeters - direct measurement	114
11.2.1	Design requirements	114
11.2.2	Hydraulic conditions at the base	114
11.2.3	Lysimeter construction	116
11.2.4	Instrumentation and measurements	116
11.2.5	Advantages and disadvantages of lysimeters	117
11.3	Empirical methods	117
11.4	Soil moisture budgeting methods	119
11.4.1	Introduction	119

11.4.2	Evapotranspiration	121
11.4.3	Penman-Grindley model	123
11.4.4	Other models	124
11.4.5	Runoff	126
11.4.6	Other empirical adjustments	126
11.4.7	Time steps	127
11.4.8	Calibration of models	127
11.5	Darcian approaches	127
11.5.1	Introduction	127
11.5.2	Theory of flow in the partially saturated zone	128
11.5.3	Numerical solution of Richards' equation	131
11.5.4	Difficulties when modelling unsaturated flow	131
11.5.5	Use of field data from the unsaturated zone	132
11.5.6	Darcy's law in the saturated zone	134
11.6	Tracer techniques	135
11.6.1	Introduction	135
11.6.2	Signature methods	136
11.6.3	Throughput method (chloride)	141
11.6.4	Sampling methods for tracers	142
11.7	Variability of recharge across catchments	143
11.8	Localised recharge	145
11.8.1	Hardrock terrain	145
11.8.2	Topographical depressions	145
11.8.3	Minor wadis	146
11.8.4	Mountain front recharge	146
12	RECHARGE FROM RIVERS	149
12.1	Introduction	149
12.1.1	River types	149
12.1.2	Controls on river recharge	151
12.1.3	General procedure for estimating river recharge	152
12.1.4	Numerical modelling of groundwater systems with connected rivers	153
12.1.5	River recharge estimation methods	154
12.2	Empirical methods	154
12.2.1	Transmission losses in ephemeral rivers	156
12.2.2	Groundwater response in ephemeral rivers	158
12.2.3	Rivers in contact with the water table	159
12.3	Water balance methods	161
12.3.1	Channel water balance	161
12.3.2	Water table rise	162
12.4	Darcian approaches	162
12.4.1	Infiltration equations and flow nets	163
12.4.2	Field data-based methods	164
12.4.3	Numerical modelling techniques for river recharge	165
12.5	Tracer techniques for river recharge	166
12.6	Surface water modelling	166
12.6.1	Flood routing models	166
12.6.2	Catchment modelling	167
12.7	Examples of river recharge estimation	168
12.7.1	Introduction	168
12.7.2	Case 1	168
12.7.3	Case 2	169
12.7.4	Case 3	170
12.7.5	Case 4	170

12.7.6	Jebbel Marra, Sudan	171
12.7.7	Case 6	171
12.7.8	Wadi Jizan, Saudi Arabia	172
12.7.9	Wadi Dhamad, Saudi Arabia	172
12.7.10	United Arab Emirates	173
<b>13</b>	<b>INTERAQUIFER FLOWS</b>	<b>175</b>
<b>14</b>	<b>RECHARGE FROM IRRIGATION</b>	<b>177</b>
14.1	Introduction	177
14.1.1	Importance of irrigation recharge	177
14.1.2	Water losses from irrigation canals	178
14.1.3	Methods of estimating recharge from irrigation canals	180
14.2	Direct measurement of canal losses	180
14.3	Empirical methods for canals	183
14.4	Water balances on canals	184
14.4.1	Inflow-outflow measurement	184
14.4.2	Ponding loss measurement	185
14.5	Tracer techniques for canal seepage	187
14.5.1	Bed penetration	187
14.5.2	Point dilution - single well method	188
14.5.3	Two well method	191
14.6	Darcian approaches for canal seepage	192
14.6.1	Introduction	192
14.6.2	Analytical methods	194
14.6.3	Modelling techniques	195
14.7	Recharge from irrigated fields	196
14.8	Examples of project studies of irrigation recharge	197
14.8.1	Introduction	197
14.8.2	Indus Plain, Pakistan	197
14.8.3	Noubaria Canal, Egypt	197
14.8.4	Case 3	198
14.8.5	Case 4	199
<b>15</b>	<b>RECHARGE DUE TO URBANIZATION</b>	<b>201</b>
15.1	Introduction	201
15.1.1	Whether to estimate urban effects on recharge	202
15.1.2	Groundwater quality in urban areas	204
15.2	Methods of estimating urban recharge	204
15.3	Water supply and sewage	205
15.3.1	Small communities	206
15.3.2	Medium sized communities	206
15.3.3	Components of water supply and sewage recharge	207
15.4	Other urban recharges	209
15.4.1	Direct recharge	209
15.4.2	Increased surface water flows	210
15.4.3	Recharge basins for storm runoff	210
15.4.4	Effluent recharge	210
15.4.5	Over-irrigation	210
15.5	Case studies	211
15.5.1	Lima, Peru	211
15.5.2	Bermuda	212
<b>16</b>	<b>NET RECHARGE OVER A REGION</b>	<b>215</b>
16.1	Introduction	215
16.2	Water table rise	215

16.3	Discharge from the basin	221
16.4	Inverse techniques	223
16.5	Aquifer wide tracers	225
16.5.1	Mathematical transit time models	225
16.5.2	Single tracer mixing cell models	227
16.5.3	Multiple tracer mixing cell models	228
<b>PART IV : CASE STUDIES</b>		
17	INTRODUCTION TO THE CASE STUDIES	233
18	NATURAL RECHARGE MEASUREMENTS IN THE HARD ROCK REGIONS OF SEMI-ARID INDIA USING TRITIUM INJECTION - A REVIEW	235
18.1	Introduction	235
18.2	Natural recharge measurement using injected tritium techniques	235
18.3	Field and laboratory procedure	236
18.4	Results and discussion	239
18.5	Recharge measurements in Aurepalle catchment	240
18.6	Effect of rainfall pattern on recharge	241
18.7	Effect of grain size on recharge values	243
18.8	Diffusion of injected Tritium activity in soil and variability of recharge rates	244
18.9	Conclusions	244
19	QUANTITATIVE ESTIMATION OF GROUNDWATER RECHARGE BY MEANS OF A SIMPLE RAINFALL-RECHARGE RELATIONSHIP	247
19.1	Introduction	247
19.2	Rainfall recharge equation	248
19.2.1	Development	248
19.2.2	Reference recharge values	248
19.2.3	Optimisation	249
19.3	Model verification	250
19.3.1	Water balance calculations	251
19.3.2	Reconstruction of the flow of dolomite springs	252
19.4	General rainfall-recharge equation	253
19.5	Linear rainfall-recharge relationship for non-dolomitic aquifers	255
19.6	Conclusions and recommendations	255
20	SOLUTE PROFILE TECHNIQUES FOR RECHARGE ESTIMATION IN SEMI-ARID AND ARID TERRAIN	257
20.1	Introduction	257
20.2	Model for the use of solutes to estimate recharge	257
20.3	Methodology	261
20.4	Results	262
20.4.1	Cyprus	262
20.4.2	Sudan	265
20.5	Discussion	269
20.6	Acknowledgements	270
21	RAINFALL - RUNOFF - RECHARGE RELATIONSHIPS IN THE BASEMENT ROCKS OF ZIMBABWE	271
21.1	Introduction	271
21.2	Hydrometeorology	272
21.3	Baseflow analysis	274
21.4	Hydrochemical analysis	277

21.5	Recharge-runoff simulation	279
21.6	Recharge to basement aquifers	281
21.7	Discussion	283
21.8	Acknowledgements	283
<b>22</b>	<b>TWO GROUNDWATER MODELS FOR ESTIMATION OF NATURAL DIRECT GROUNDWATER RECHARGE - A COMPARATIVE STUDY IN SANDY TILL</b>	<b>285</b>
22.1	Description of the study area	285
22.2	Methods	288
22.2.1	Estimation of groundwater recharge from one-dimensional soil water modelling	288
22.2.2	Soil moisture budget model	290
22.3	Results	291
22.3.1	Estimation of groundwater recharge from the soil water modelling	291
22.3.2	Soil moisture budget model	296
<b>23</b>	<b>RECHARGE IN THE MEHSANA ALLUVIAL AQUIFER, INDIA</b>	<b>297</b>
23.1	Introduction	297
23.2	Details of the aquifer system	298
23.3	Sources of recharge	300
23.3.1	Rainfall and irrigation recharge	300
23.3.2	Effect of farming practice	301
23.3.3	Recharge due to losses from canals	301
23.3.4	Losses from rice fields	302
23.3.5	Comments	303
23.4	Estimating recharge by tracers	303
23.4.1	Environmental tritium	303
23.4.2	Other tracers	305
23.5	Water table fluctuations	306
23.6	Actual and potential recharge	309
23.7	Recharge estimated from mathematical models	310
23.8	Discussion	312
<b>24</b>	<b>ANALYSIS OF LONG DURATION PIEZOMETRIC RECORDS FROM BURKINA FASO TO DETERMINE AQUIFER RECHARGE</b>	<b>313</b>
24.1	Introduction	313
24.2	Available data	313
24.2.1	Piezometric levels	313
24.2.2	Hydrodynamic characteristics	314
24.2.3	Rainfall	314
24.2.4	Potential evapotranspiration	314
24.3	The lumped parameter model	314
24.4	Calibration of model	317
24.4.1	Determination of soil retention capacity	317
24.4.2	Determination of runoff proportion	317
24.5	Data extension	320
24.5.1	Uniqueness of calibration	320
24.5.2	Reliability of the model	321
24.5.3	Simulation of return to more abundant rainfall	321
24.6	Conclusions	322
<b>25</b>	<b>RECOMMENDED BOOKS</b>	<b>325</b>
