Contents

Preface		xiii
1	**Introducing the Medium**	1
1.1	Water as a fluid	1
1.2	The physics of fluids	2
1.3	Physical properties of water	6
1.3.1	Density and related measures	6
1.3.2	Viscosity and the "no-slip condition"	7
1.3.3	Surface tension	9
1.3.4	Thermal properties	12
1.3.5	Entrained air and dissolved oxygen	14
2	**How to Study a Stream**	17
2.1	Focusing on physical habitat	17
2.2	The planning process	27
2.2.1	General	27
2.2.2	What is the question?	28
2.2.3	Choosing your method: The study design	29
2.2.4	Collecting information: The value of a pilot study	30
2.2.5	Analysing and presenting the results	31
2.3	Strategic sampling	32
2.3.1	Population, sample and other vocabulary of the trade	32
2.3.2	The errors of our ways	34
2.3.3	Considerations in choosing a sampling design	35
2.3.4	Partitioning the stream	38
2.3.5	Basic sampling designs	40
2.3.6	Sample size	46
2.4	Know your limitations	47
2.5	Examples of how and how not to conduct a study (M. Keough)	49
3	**Potential Sources of Data (How to Avoid Reinventing the Weir)**	53
3.1	Data types	53
3.2	Physical data sources, format, and quality	54
3.2.1	Where to look for data and what you are likely to find	54

3.2.2 Data formats for AQUAPAK programs 58
3.2.3 Data quality 59
3.2.4 How to fill in a steamflow record 64
3.3 Maps 65
3.3.1 What's a map and why would you need one? 65
3.3.2 Map interpretation 71
3.3.3 Revision, accuracy and standardization of maps 74
3.4 Photographs and other remotely sensed data 74
3.4.1 What is remote sensing? 74
3.4.2 Photographs 75
3.4.3 Remote sensing imagery 78
3.4.4 Sources of imagery 80
3.4.5 Interpretation, classification and "ground truthing" of imagery 81

4 Getting to Know Your Stream 83
4.1 General character 83
4.1.1 Preliminary introduction 83
4.1.2 Putting the stream channel and its catchment into context 83
4.1.3 Initial assessments of the state of a stream 86
4.1.4 An example of a qualitative survey: State of the Streams, Victoria, Australia 93
4.2 Catchment characteristics 96
4.2.1 General 96
4.2.2 Delimiting and measuring the catchment area 96
4.2.3 Stream length 98
4.2.4 Stream patterns 100
4.2.5 Stream orders 102
4.2.6 Miscellaneous morphometric measures 107
4.3 Streamflow hydrographs 112
4.3.1 Definitions 112
4.3.2 Hydrograph separation 113
4.3.3 Factors influencing the hydrograph shape 114
4.3.4 Recession curve analysis 116
4.4 How does this stream measure up? 117
4.4.1 General 117
4.4.2 Annual statistics 118
4.4.3 Monthly statistics 121
4.4.4 Daily statistics 122
4.4.5 A method for describing hydrological predictability: Colwell's indices 124

5 How to Have a Field Day and Still Collect Some Useful Information 127
5.1 Venturing into the field 127
5.2 Surveying: a brief introduction 129
5.2.1 General 129
5.2.2 Horizontal distance 129
5.2.3 Vertical distance 130
5.2.4 Slope 132
5.2.5 The full contingent of co-ordinates, including methods of mapping 135
5.3 Method of measuring areal extent 142
5.3.1 General 142
5.3.2 Visual estimation of percentage cover 142
5.3.3 Point intercept method 143
5.3.4 Line intercept method 144
5.3.5 Grids 144
5.4 Surveying streams 145
5.4.1 General 145
5.4.2 Cross-sectional profiles 146
5.4.3 Channel slope and thalweg profile 149
5.4.4 Bed surface materials 149
5.4.5 Mapping the stream reach 150
5.5 Measurement of water level or stage 151
5.5.1 General 151
5.5.2 The staff gauge 152
5.5.3 Maximum stage recorders or crest gauges 152
5.5.4 Automatic recorders 152
5.5.5 Depth to the water table: Piezometry 154
5.6 Discharge measurement: Choosing a control section 155
5.7 Direct measurement of discharge 156
5.7.1 General 156
5.7.2 Volumetric measurement 157
5.7.3 Velocity-area method 157
5.7.4 Dilution gauging methods 163
5.7.5 Artificial structures 167
5.8 Stage–discharge relationships and other indirect methods of deriving discharge 168
5.8.1 Stage–discharge relation 168
5.8.2 Slope–area method of estimating discharge 171
5.9 Substrates and sediments: Sampling and monitoring methods 176
5.9.1 General 176
5.9.2 Bank material sampling (soil sampling) 177
5.9.3 Bed material sampling 177

5.9.4 Sampling suspended sediments 179
5.9.5 Sampling bedload sediments 185
5.9.6 Erosion and scour 189
5.10 Substrates and sediments: Analysis of physical properties 191
5.10.1 General 191
5.10.2 Soil moisture content, gravimetric method 192
5.10.3 Sediment concentration 192
5.10.4 Particle size 194
5.10.5 Presentation of particle size data 203
5.10.6 Particle shape: Roundness, sphericity 206
5.10.7 Particle arrangement and other miscellaneous bulk properties 209
5.11 Water quality 213

6 Water at Rest and in Motion 215
6.1 General 215
6.2 Hydrostatics: The restful nature of water 216
6.2.1 Pressure 216
6.2.2 Buoyancy 217
6.3 Studying the flow of fluids 219
6.3.1 Steady and unsteady flow 219
6.3.2 Streamlines 220
6.3.3 Conserving mass: The principle of continuity 221
6.3.4 Energy relationships and the Bernoulli equation 223
6.4 Narrowing the focus: Flow of a viscous fluid 225
6.4.1 Laminar and turbulent flow 225
6.4.2 Flow past solid surfaces: The boundary layer 231
6.5 The microenvironment: Flow near solid surfaces 239
6.5.1 General 239
6.5.2 Describing the velocity profile and boundary layer thickness near a solid surface 239
6.5.3 Shear stress and drag forces 243
6.5.4 Flow around bluff bodies 247
6.5.5 Lift 259
6.5.6 Methods of microvelocity measurement 260
6.6 Open-channel hydraulics: The macroenvironment 263
6.6.1 First, a few definitions 263
6.6.2 Introduction to hydraulics 264
6.6.3 The variations of velocity in natural channels 267
6.6.4 Energy relationships in streams 271
6.6.5 Shear stress and the uniform flow equations of Chezy and Manning 278
6.6.6 Water surface profiles in gradually varied flow 282

6.6.7 Hydraulic jumps and drops, alias rapidly varied flow 285

7 Patterns in Shifting Sands 288

7.1 Introduction to stream channels, streambeds and transported materials 288
7.1.1 General 288
7.1.2 Making up a channel bed 289
7.1.3 What sort of debris is transported? 290
7.1.4 Sediment distribution and discharge 293
7.1.5 Ecological implications 296
7.2 Stream shaping processes 298
7.2.1 A note about stream power 298
7.2.2 Adjustments and equilibrium 300
7.2.3 Balancing slope, streamflow, and sediment size and load 302
7.2.4 Floods and floodplain formation 304
7.2.5 Channel-forming discharges 305
7.2.6 Fluvial geometry 307
7.3 The ins and outs of channel topography 312
7.3.1 Channel patterns 312
7.3.2 Pools and riffles 315
7.3.3 Bars 319
7.3.4 Dunes, ripples and flat beds of sand 321
7.4 Sediment motion 324
7.4.1 Erosion, transport and deposition 324
7.4.2 Deviations from "ideal" 326
7.4.3 Predicting a particle's "get up and go" 328
7.5 Sediment yield from a catchment 336
7.5.1 Sediment sources and sinks 336
7.5.2 Sediment yield variations 339
7.5.3 Computing sediment discharge and yield from measured concentrations 340
7.5.4 The estimation of sediment discharge from streamflow 342

8 Dissecting Data with a Statistical Scope 346

8.1 Introduction 346
8.1.1 General 346
8.1.2 Floods and droughts 347
8.1.3 Data considerations 349
8.1.4 Putting statistics into a proper perspective 350
8.2 Streamflow frequency analysis 351
8.2.1 General concepts 351
8.2.2 Probability and average recurrence intervals 352

8.2.3 The data series 353
8.2.4 Graphical methods: The probability plot 355
8.2.5 Fitting probability distributions 358
8.2.6 A few good probability distributions 360
8.2.7 Zeros and how to treat them 365
8.2.8 Goodness, the distribution fits! 368
8.2.9 Interpreting frequency curves 370
8.3 Flow duration curves 373
8.3.1 General 373
8.3.2 Constructing the curves 375
8.3.3 Interpretation and indices 375
8.4 Flow spell analysis 377
8.5 Extrapolating from the known to the unknown 378
8.5.1 General 378
8.5.2 Transposing data from gauging stations to less-endowed sites 380
8.5.3 Regionalization 382
8.6 Numerical taxonomy: Multivariate analysis techniques 388
8.6.1 General 388
8.6.2 Similarity/dissimilarity indices 389
8.6.3 Ordination 390
8.6.4 Classification 394
8.6.5 Other sources of information on numerical taxonomy 401

9 "Putting It All Together": Stream Classification and Management 403
9.1 Putting theories into practice 403
9.2 Stream and catchment classification 410
9.2.1 General 410
9.2.2 Land classification 413
9.2.3 Stream classification 416
9.2.4 Hierarchical classification 422
9.2.5 Summary 423
9.3 Environmental instream flow requirements 424
9.3.1 General 424
9.3.2 Historical discharge or "rule of thumb" methods 426
9.3.3 "Transect" methods 428
9.3.4 Instream habitat simulation methods 432
9.3.5 Artificial floods: "Flushing flows" 443
9.3.6 Summary of methods 446
9.4 Stream rehabilitation 447
9.4.1 General 447
9.4.2 Passive methods 449

9.4.3 Channel modifications 454
9.4.4 Instream structures 467

Appendix 1. Basic Statistics 474
A1.1 Summary statistics 474
A1.2 Describing distributions of data 476
A1.3 Just a moment 479
A1.4 Correlation and regression: How closely is this related to that? 480
A1.4.1 General 480
A1.4.2 Simple linear regression and least squares fitting 484
A1.4.3 Multiple regression 487
A1.4.4 Autocorrelation and intercorrelation 491
A1.5 Further information on statistics 494

Appendix 2. About AQUAPAK 495
