Proceedings of the ModelCARE'99 conference held in Zürich, Switzerland, from 20 to 23 September 1999. This conference was jointly organized by the:

Swiss Federal Institute of Technology (ETH), Zürich, Switzerland

International Commission on Groundwater (ICGW), of the International Association of Hydrological Sciences (IAHS)

Committee on Groundwater Hydraulics, of the International Association of Hydraulic Engineering and Research (IAHR)

IAHS Publication no. 265
in the IAHS Series of Proceedings and Reports

Contents

Preface *by F. Stauffer, W. Kinzelbach, K. Kovar & E. Hoehn* v

1 Modelling Concepts

Verification of a fracture network transport model including two-dimensional rock matrix diffusion *W. Barten, P. C. Robinson & B. Tirbonod* 3

Modelling of karst development considering conduit–matrix exchange flow *Sebastian Bauer, Rudolf Liedl & Martin Sauter* 10

Characterization of gypsum aquifers using a coupled continuum–pipe flow model *Steffen Birk, Rudolf Liedl & Martin Sauter* 16

Modelling of dual porosity media: comparison of different techniques and evaluation of the impact on plume transport simulations *S. Brouyère, A. Dassargues, R. Therrien & E. A. Sudicky* 22

Removing the boundaries to efficient groundwater contaminant transport modelling *Chris Kennedy, Hans Ericsson & Bill Lennox* 28

Artificial neural networks: development and application in groundwater pollution remediation design *T. D. Krom & D. Rosbjerg* 34

Application of economic-risk analysis for design and optimization of the Kansas City Plant interceptor system *Alan D. Laase, James O. Rumbaugh III, Evan R. Anderman & Joseph L. Baker* 41

Validity and sensitivity analysis of a new comprehensive clogging model *A. Pérez-Paricio & J. Carrera* 47

Development of a hydrogeological model for the Kiev conurbation *V. M. Shestopalov, Yu. F. Rudenko, A. S. Bohuslavsky, A. B. Markovska & N. B. Kasteltseva* 54

A method-of-characteristics concept for advective tracer transport in fracture networks *C. Thorenz, O. Kolditz & W. Zielke* 60

An integrated groundwater, pipe and open-channel flow model for simulation of aquifer-adit systems *Beiyan Zhang & David N. Lerner* 67

2 Stochastic Modelling

Tracer travel time analysis for inference of aquifer geostatistical parameters *Alberto Bellin & Yoram Rubin* 77

Characterization of dispersion in an alluvial aquifer by tracing techniques and stochastic modelling *N. Courtois, O. Gerbaux-Francois, C. Grenier, P. Maugis, E. Mouche, C. de Fouquet, P. Goblet & E. Ledoux* 84

Solute transport in evolving scale formations: analysis of the concentration field *Aldo Fiori & Alberto Bellin* 90

The use of well transport theory for identification of aquifer properties: 1. Radial divergent flow; 2. Recharging and pumping wells flow *G. Dagan & P. Indelman* 96

The reliability of a stochastic fracture generator *A. Hemminger, L. Neunhäuserer & R. Helmig* 104

Evaluation of the transition characteristics of macroscopic dispersion and estimation of the non-uniform hydrogeological structure *Kei Nakagawa & Kenji Jinno* 110

Permeability field estimation by conditional simulations of geophysical data *Luís Miguel Nunes & Luís Ribeiro* 117

Simultaneous estimation of transmissivity (or conductivity), storage coefficient (or porosity) and effective recharge, in a stochastic framework *M. M. Pacheco Figueiredo, L. Ribeiro & J. M. P. Ferreira Lemos* 124

Three-dimensional steady state flow to a well in a randomly heterogeneous aquifer *Monica Riva, Alberto Guadagnini, Shlomo P. Neuman & Daniel M. Tartakovsky* 131

On the concept of block effective macrodispersivity *Yoram Rubin* 137

Upscaling transmissivity under radially convergent flow *X. Sánchez-Vila, M. Bayer, J. Carrera & C. L. Axness* 141

An algorithm for the reconstruction and visualization of 3-D groundwater units *N. M. Sirakov, L. Ribeiro, P. Pina & F. H. Muge* 148

3 Parameter Estimation and Model Calibration

A hybrid Marquardt-Simulated Annealing method for solving the groundwater inverse problem *A. Alcolea, J. Carrera & A. Medina* 157

Calibration of the Oro Moraine multi-aquifer system: role of geology and objective function *Jos Beckers & Emil O. Frind* 164

Influence of pumping head data in the conditional estimation of a transmissivity field *C. Darcel, M. Donato, C. Grenier, P. Maugis & E. Mouche* 171

Calibration of a 3-D groundwater model of the post-Permian sedimentary cover at the Morsleben radioactive waste repository site *B. Ehrminger, M. Genter, W. Klemenz & J. Wollrath* 177

Calibration of 3-D transient groundwater flow models for fractured rock *J. J. Gómez-Hernández, H. J. W. M. Hendricks Franssen, A. Sahuquillo & J. E. Capilla* 185

Guidelines for model calibration and application to flow simulation in the Death Valley regional groundwater system *Mary C. Hill, Frank A. D'Agnese & Claudia C. Faunt* 195

A comparison of solute-transport solution techniques based on inverse modelling results *Steffen Mehl & Mary C. Hill* 205

A new look at traditional deterministic flow models and their calibration in the context of randomly heterogeneous media *Shlomo P. Neuman & Alberto Guadagnini* 213

Computational aspects of the coupled inversion of groundwater flow and mass transport *A. Sahuquillo, H. J. W. M. Hendricks Franssen, J. J. Gómez-Hernández & J. E. Capilla* 222

Determination of the hydraulic properties of a multilayered aquifer from pumping test data using genetic algorithms *Y. Takeshita, I. Kohno & K. Yasui* 229

Automatic model calibration using a universal approximator *Paul Torfs & George Bier* 236

Three-dimensional inverse modelling of pneumatic tests in unsaturated fractured rocks *Velimir V. Vesselinov, Shlomo P. Neuman & Walter A. Illman* 243

Calibration and sensitivity analysis of the 3-D Cape Cod tracer test *S. Wagner, F. Häfner, S. Boy & A. Behr* 250

The benefit of using data on canal seepage and tracer concentration in aquifer parameter estimation *E. Zechner, D. Genereux & J. Saiers* 256

4 Reliability of Model Prediction

Predictive modelling of flow in a two-dimensional intermediate-scale, heterogeneous porous media *Gilbert R. Barth, Mary C. Hill, Tissa H. Illangasekare & Harihar Rajaram* 265

Uncertainty analysis of groundwater heads around underground storage caverns due to the spatial variability of hydraulic conductivity *Il-Moon Chung, Woncheol Cho & Jun-Haeng Heo* 272

An optimal decision for contaminant plume capture design in a groundwater system under parameter and boundary uncertainty *Bernard B. Hsieh* 278

Computationally efficient methods for the quantification of uncertainties in groundwater modelling *Harald Kunstmann & Wolfgang Kinzelbach* 285

Uncertainty propagation using the point estimate method *S. Mishra* 292

Linking groundwater, contaminant transport, and water distribution models to determine the uncertainty of drinking water contaminant exposure *S. D. Normani, J. F. Sykes & W. C. Lennox* 297

Reliability-based evaluation of groundwater remediation strategies *H. W. Reeves, J. Lee, C. H. Dowding & A. J. Graettinger* 304

Stochastic well capture zones in fully, leaky, and randomly confined, heterogeneous aquifers *Matthijs van Leeuwen, Adrian P. Butler, Jacob A. Tompkins & Chris B. M. Te Stroet* 310

Contaminant transport modelling under random sources *P. Patrick Wang & Chunmiao Zheng* 317

5 Comprehensive Use of Field Information

Value of seismic data for the risk assessment of mass transport: a case study *J. E. Capilla, J. J. Gómez & A. Sahuquillo* 327

Modelling of radon-222 as a proxy for vapour phase transport in the unsaturated zone *D. A. Gibbons, R. Kalin & H. Johnston* 334

Methodology for the hydraulic characterization of a granitic block *L. Martínez-Landa, J. Carrera, J. Guimerà, E. Vazquez-Suñé, L. Vives, P. Meier & T. Fierz* 340

Modelling the tritium release from underground nuclear tests performed at Mururoa and Fangataufa: a conservative estimate based on uncertain data *W. Pfingsten & J. Hadermann* 346

Variational data assimilation of soil moisture and temperature from remote sensing observations *R. H. Reichle, D. McLaughlin & D. Entekhabi* 353

Conditional geostatistical modelling of an alluvial aquifer system characterized by poor-quality shallow groundwater *N. C. Ruud, T. Harter, G. S. Weissmann & G. E. Fogg* 360

Estimation of the sustainable yield of a borehole including boundary information, drawdown derivatives and uncertainty propagation *Gerrit van Tonder, Harald Kunstmann, Yongxin Xu & François Fourie* 367

6 Nonlinear and Coupled Flow and Transport Modelling

Density Flow Modelling

On modelling of density driven flow *P. Ackerer, A. Younes, S. E. Oswald & W. Kinzelbach* 377

A comparison of different model concepts for saltwater intrusion processes *R. Hinkelmann, H. Sheta, H. Class & R. Helmig* 385

Three-dimensional density-dependent calculation of matrix fracture flow *Christoph König & Carola Blömer* 392

A three-dimensional physical model for verification of variable-density flow codes *S. E. Oswald & W. Kinzelbach* 399

Conceptual and numerical modelling of density induced migration of radioactive contaminants at the Lake Karachai waste disposal site *V. G. Rumynin, V. A. Mironenko, L. N. Sindalovsky, A. V. Boronina, P. K. Konosavsky, C. Gallo & E. Leonardi* 405

Multiphase Modelling

Characterization of residual NAPL using partitioning tracers: temporal moment analysis *Sten Berglund, Daniel Torstensson & George Demmy* 412

Error propagation in the Newton-based solution control of unsaturated flow *Hans-Jörg G. Diersch & Pierre Perrochet* 418

Reliability of models for isothermal and non-isothermal multiphase processes in porous media *R. Helmig & H. Class* 425

Two-phase flow simulation of water-sealing of compressed air storage under cyclic pressure change in an unlined rock cavern *Takeshi Kawatani & Masahiko Saito* 432

The influence of interfacial tension reduction on organic liquid migration: numerical and experimental comparisons *Klaus M. Rathfelder, Linda M. Abriola, Michael A. Singletary & Kurt D. Pennell* 439

Multiphase modelling of gas storage in aquifer with automatic calibration and confidence limits *Dominique Thiéry & Karine Guedeney* 448

DNAPL spill and plume migration in a naturally heterogeneous aquifer analogue *Janet Whittaker, Georg Teutsch & Peter Grathwohl* 455

Reactive Transport Modelling

Transfer of tracer data to mixing-controlled reactive transport *Olaf A. Cirpka* 461

Estimation of sequential degradation rates of perchloroethylene by "history matching" *R. A. A. Hetterschijt, C. B. M. te Stroet & T. N. P. Bosma* 468

Multicomponent solute transport model with cation exchange in a redox subsurface environment *Yoshinari Hiroshiro, Kenji Jinno, Shin-Ichiro Wada, Takushi Yokoyama & Motohiro Kubota* 474

Reactive transport modelling with simulator MODCALIF-CHEM: prediction of the environmental impact of lignite dump waters *Nils Hoth, Alexej Kornjaev & Frieder Häfner* 481

Assessing uncertainty in remediation by natural attenuation of a petroleum hydrocarbon contaminated site *Monica P. Suarez & Hanadi S. Rifai* 489

In situ measurements and numerical simulation of nitrate leaching from farm soil *N. Yamashita & S. Sugio* 495

Coupled Surface Water and Groundwater Modelling

Coupling groundwater models to external simulation modules: strategies and application to surface waters *C. Kaiser, H.-J. G. Diersch, R. Gründler & V. Zlotnik* 502

Modelling groundwater recharge from intermittently flooded areas by calibration of time dependent leakage parameters *U. Mohrlok, E. Eberhardt & G. H. Jirka* 509

Application of a physically-based numerical model of surface and subsurface water flow and solute transport *J. E. VanderKwaak & E. A. Sudicky* 515
