

Water Recycling and Resource Recovery in Industry

Analysis, technologies and implementation

Edited by Piet Lens, Look Hulshoff Pol,
Peter Wilderer and Takashi Asano

IWA
Publishing

Contents

<i>List of contributors</i>	xiv
<i>Preface</i>	xix
Part I: Industrial reuse for environmental protection	1
1 Sustainable water management in industry	3
<i>Jacques J.M. van de Worp</i>	
1.1 The sustainability concept	3
1.2 Water resources	5
1.3 Sustainable water use in industry	14
1.4 Sustainable industrial water management	23
1.5 Conclusions	25
1.6 References	26
2 Water reclamation, recycling and reuse in industry	29
<i>Audrey D. Levine and Takashi Asano</i>	
2.1 Introduction	29
2.2 Water reuse definitions	30
2.3 Industrial water reuse	30
2.4 Wastewater treatment technology	35
2.5 Industrial use of reclaimed municipal wastewater for cooling tower make-up water	44
2.6 Industrial use of reclaimed municipal wastewater for industrial process water	49
2.7 Summary and conclusions	50
2.8 References	50

3	Environmental protection in industry for sustainable development	53
	<i>Piet N.L. Lens, Marcus Vallero, Graciella Gonzalez-Gil, Salih Rebac and Gatzke Lettinga</i>	
3.1	Introduction	53
3.2	Integrated concepts for sustainable industrial technology	54
3.3	Anaerobic technology in clean technology	57
3.4	Risk assessment and public acceptance	61
3.5	References	63
Part II: Resource protection policies in industry		67
4	Cleaner production: history, concepts, policies and instruments, incentives and practical examples	69
	<i>Frank van den Akker</i>	
4.1	Introduction	70
4.2	Explanation of methods and measures to achieve sustainable development	71
4.3	Comparison of Instruments in 70s and 80s with those for the 21st century	77
4.4	Process of change towards sustainable development	78
4.5	“Rules of the game” for successful collaboration	81
4.6	Closing remarks	83
4.7	References	84
5	National policies for efficient resource utilization and protection	86
	<i>Ralph A. Luken and Anja Sedic</i>	
5.1	Introduction	86
5.2	Rationale for reducing resource use intensity in industry	87
5.3	Command and control instruments	89
5.4	Economic instruments	91
5.5	Other instruments	101
5.6	Evaluation of national policies for resource conservation	103
5.7	Supporting measures to adopt input oriented policies	104
5.8	References	106
6	Strategies for the environmental management of chains	109
	<i>Geoffrey Hagelaar and Jack van der Vorst</i>	
6.1	Introduction	109
6.2	Supply chain management	112
6.3	Life cycle assessment	117
6.4	Environmental care strategies and types of LCA	120
6.5	Requirements to types of LCA implementation	121
6.6	Supply chain structures and requirements	123

6.7	Case studies	125
6.8	Prospect for chain management in closing industrial cycles	128
6.9	References	128
7	Ecological modernization of industrial ecosystems <i>Kris van Koppen (C.S.A.) and Arthur P.J. Mol</i>	132
7.1	Introduction	132
7.2	Industrial ecology as a concept of industrial transformation	134
7.3	Agents and institutions in industrial transformation	138
7.4	Eco-industrial park configurations	146
7.5	Conclusions and outlook	155
7.6	References	156
Part III: Tools to assist on in closing industrial water and resource cycles – A. Regulatory measures		159
8	International guidelines for water recycling <i>John Anderson</i>	161
8.1	Introduction	161
8.2	Health and environmental protection	163
8.3	Examples of water recycling regulations and guidelines	165
8.4	Developing an international framework with national decision making	170
8.5	Discussion	176
8.6	Conclusions	177
8.7	References	177
9	Eco management and audit scheme a step forward towards sustainability <i>Frans Lemaire</i>	179
9.1	Introduction	179
9.2	Objectives of EMAS	181
9.3	EMAS and EPER (European pollutant emissions register)	182
9.4	EMAS: A stepwise approach	182
9.5	Auditing	189
9.6	Conclusions	190
9.7	References	190

10	Best available techniques (BAT) for the reuse of waste oil <i>Roger Dijkmans and Anne Jacobs</i>	191
10.1	Best Available Techniques (BAT)	191
10.2	Treatment of waste oil in Flanders	193
10.3	Description of the treatment and pre-treatment systems	194
10.4	Technical, economic and environmental evaluation of the systems	196
10.5	References	200
Part III: Tools to assist on in closing industrial water and resource cycles – B. System analysis		203
11	Water pinch analysis: minimisation of water and wastewater in the process industry <i>Danielle Baetens</i>	205
11.1	Introduction	205
11.2	Theoretical framework	206
11.3	Case study of a water pinch application	219
11.4	Water pinch: practical implementation	225
11.5	References	227
12	Key parameter methodology for increased water recovery in the pulp and paper industry <i>Johannes Kappen and Peter A. Wilderer</i>	229
12.1	Water loops in papermaking systems	229
12.2	Definition of key characteristics	231
12.3	Verification of the definitions	238
12.4	Application of the <i>K</i> -parameters	243
12.5	Conclusions and Outlook	249
12.6	References	250
13	Systematic approach to water resource management in industry <i>Antoin S. Deul</i>	252
13.1	Introduction	252
13.2	Challenges of water reuse	253
13.3	Systematic approach to water resource management	256
13.4	Case study – Paper industry	261
13.5	Conclusions	269
13.6	References	269
14	A customised software tool for environmental impact assessment of drinking water production and distribution <i>Dieuwke K. Voorhoeve and Ronald Hopman</i>	271
14.1	Introduction	271
14.2	LCA	272

14.3	LCAqua	275
14.4	References	280
15	Quantifying the sustainability of technology by exergy analysis <i>Jo Dewulf and Herman Van Langenhove</i>	282
15.1	Introduction: sustainability and technology	282
15.2	Exergy	286
15.3	Exergy and sustainability: principles	286
15.4	Exergy and sustainability: applications	290
15.5	Further perspectives	294
15.6	References	295
Part III: Tools to assist on in closing industrial water and resource cycles – C. Characterisation of process water quality		
16	Analytical techniques for measurement of physico–chemical properties <i>Fritz H. Frimmel</i>	297
16.1	Introduction	297
16.2	Basis of analytical data	298
16.3	Spectrometry	302
16.4	Chromatography	307
16.5	Electroanalytical methods	312
16.6	Special methods for water analysis	315
16.7	On-line monitoring	320
16.8	References	320
17	Use of modelling to prevent food contamination in production chains <i>Peter de Jong</i>	323
17.1	Introduction	323
17.2	Predictive models	326
17.3	Application in the food industry	331
17.4	Conclusions and opportunities	334
17.5	References	334
Part IV: Technological aspects of closing industrial cycles –		
A. Potentials of environmental biotechnology 337		
18	Potentials of biotechnology in water and resource cycle management <i>Valentina Lazarova</i>	339
18.1	Introduction	339
18.2	Role of water reuse in closing the water cycle	340

18.3	Technical advance and challenges for water reuse	343
18.4	Innovative biotechnologies for closing water cycle	347
18.5	Design of innovative bioreactors for industrial wastewater treatment	354
18.6	Conclusions	355
18.7	References	356
19	Novel biological processes for advanced wastewater treatment <i>Fernando Fdz-Polanco, Santiago Villaverde, Miguel A. Uruña and Pedro A. García-Encina</i>	359
19.1	Introduction	359
19.2	Novel bioconversion processes of nitrogenous compounds	361
19.3	Novel bioconversion processes of phosphorus compounds	372
19.4	Novel bioconversion processes of sulfurous compounds	376
19.5	References	382
20	Biodegradation of recalcitrant and xenobiotic compounds <i>Graciella Gonzalez-Gil, Robbert Kleerebezem, Bo Mattiasson and Piet N.L. Lens</i>	386
20.1	Introduction	386
20.2	Microbiology of anaerobic biodegradation	389
20.3	Anaerobic bioreactor technology	407
20.4	Novel developments	417
20.5	References	422
Part IV: Technological aspects of closing industrial cycles – B. Advanced technologies for meeting reuse criteria		431
21	Physico-chemical wastewater treatment <i>Adriaan R. Mels and Eero Teerikangas</i>	433
21.1	Introduction	433
21.2	Physico-chemical unit operations	434
21.3	Unit operations aimed at particle removal	436
21.4	Unit operations aimed at removal of dissolved contaminants	448
21.5	References	451
22	Advanced oxidation technologies for industrial water reuse <i>Alfons Vogelpohl</i>	453
22.1	Introduction	453
22.2	Ozone, Hydrogen peroxide	454
22.3	Photooxidation	457

22.4	Fenton's reaction, Photo Fenton process	459
22.5	Photocatalysis	463
22.6	Electron Beam Irradiation	467
22.7	Sonolysis	468
22.8	Combination of biological and chemical Processes	468
22.9	Conclusions	469
22.10	References	469
23	Industrial experience of water reuse by membrane technology <i>Simon J. Judd</i>	472
23.1	Introduction	472
23.2	Membranes	473
23.3	Membrane processes	477
23.4	Case studies	478
23.5	References	487
Part IV: Technological aspects of closing industrial cycles –		
C. Resource recovery and management		489
24	Technologies for nitrogen recovery and reuse <i>Max Maurer, Jane Muncke and Tove A. Larsen</i>	491
24.1	Introduction	491
24.2	Wastewater	494
24.3	Urine source separation	502
24.4	Conclusions	506
24.5	References	507
25	Phosphorus recycling potentials <i>Dees Lijmbach, John E. Driver, Willem Schipper</i>	511
25.1	Introduction	511
25.2	History of phosphorus	512
25.3	Phosphorus life cycle	512
25.4	Closing the phosphorus cycle	514
25.5	Phosphate recycling case studies	517
25.6	Economic assessment	521
25.7	Further outlook	521
25.8	Conclusions	522
25.9	References	522
26	Material and nutrient recycling and energy recovery from solid waste: a systems perspective <i>Jan-Olov Sundqvist</i>	524
26.1	Introduction	524
26.2	The ORWARE model	525

26.3	System boundaries in this study	529
26.4	Description of the scenarios	531
26.5	System analysis	532
26.6	Conclusions	540
26.7	References	541
Part V: Examples of closed water cycles in industrial processes		543
27	Water minimisation and reuse in the textile industry <i>Daide Mattioli, Francesca Malpei, Giuseppe Bortone and Alberto Rozzi</i>	545
27.1	Textile and clothing industry	545
27.2	Characteristics of textile water and wastewater	550
27.3	Textile wastewater minimisation, treatment and reuse	556
27.4	Case studies	567
27.5	References	581
28	Novel process on thermophilic conditions opens up new opportunities of integrated white water treatment in recycling mills – Kidney technology-concept <i>Dieter Pauly</i>	585
28.1	Introduction	585
28.2	State of the art	586
28.3	Results and discussion	592
28.4	Conclusions	601
28.5	Acknowledgements	602
28.6	References	602
29	Biological recovery of metals, sulfur and water in the mining and metallurgical industry <i>Jan Weijma, Cris F.M. Copini, Cees J.N. Buisman and Carl E. Schultz</i>	605
29.1	Introduction	605
29.2	Sulfate-reducing bacteria	607
29.3	Biological sulfate reduction technology for metal removal	610
29.4	Applications in the mining and metallurgical industries	613
29.5	Acknowledgements	620
29.6	References	620
30	Solar photocatalysis: application to the treatment of pesticides in water <i>Julian Blanco and Sixto Malato</i>	623
30.1	Introduction	623
30.2	Solar photocatalysis fundamentals	624

30.3	Experimental systems: technology issues	627
30.4	Photocatalytic treatment of pesticides	633
30.5	Case study: recycling of pesticide bottles	642
30.6	Conclusions	652
30.7	References	652
31	Water reuse in greenhouse horticulture	654
	<i>Erik A. van Os and Cecilia Stanghellini</i>	
31.1	Introduction	654
31.2	Water availability	656
31.3	Greenhouse horticulture	657
31.4	Soil-less growing systems	658
31.5	Disinfection of the nutrient solution	658
31.6	Conclusions	662
31.7	References	662
32	The industrial symbiosis in kalundborg, Denmark – industrial networking and cleaner industrial production	664
	<i>Noel Brings Jacobsen</i>	
32.1	The Symbiosis at Kalundborg	664
32.2	Facts	667
32.3	Reflections	669
32.4	Lessons learned	670
32.5	References	671
