# CONTENTS

<b>PREFACE</b>	<b>1</b>
<b>PART I: AN HISTORICAL PERSPECTIVE</b>	<b>13</b>
<b>I. THE CAUSES OF POOR PERFORMANCE OF IRRIGATION PROJECTS: AN UNFINISHED DEBATE</b>	<b>13</b>
Perceived deficiencies in technical design and management	14
Administrative and behavioural reasons	17
Criticism of engineers	17
Criticism of development banks and donor agencies	19
The slow recognition of design as a main reason of the poor performance of irrigation systems	21
The dawn of a new approach to irrigation design and management	24
<b>II. PERFORMANCE OF IRRIGATION SYSTEMS</b>	<b>27</b>
<b>III. A REVIEW OF THE ROLE OF INTERNATIONAL ORGANIZATIONS</b>	<b>31</b>
1. The World Bank	31
The lack of an irrigation policy paper	31
Pressure to lend	32
Use of overoptimistic assumptions during design and appraisal	34
2. The Asian Development Bank	34
3. The FAO Cooperative Programme guidelines	35
Identification and preparation of irrigation projects	35
Updating of the 1984 irrigation guidelines (1996)	37
<b>IV. TECHNICAL VERSUS MANAGERIAL CHANGES</b>	<b>40</b>
<b>V. TECHNOLOGY VERSUS INSTITUTIONAL REFORMS: USER PARTICIPATION</b>	<b>45</b>
From social to business associations	45
Impact of irrigation management transfer on the performance of irrigation projects	49
<b>VI. IMPROVED IRRIGATION IN THE CONTEXT OF WATER RESOURCE MANAGEMENT</b>	<b>52</b>

<b>PART II: CHANGING APPROACHES TO THE DESIGN OF IRRIGATION PROJECTS</b>	<b>55</b>
VII. IRRIGATION DESIGN CONCEPTS IN SELECTED COUNTRIES	55
A. Traditional irrigation systems	55
B. Country experience	56
1. India	56
2. Pakistan	58
3. Egypt: the Nile valley system	62
4. Sudan: the Gezira project	63
5. China	66
6. North African countries	68
7. Iran	70
8. Malaysia	72
9. Indonesia	73
10. United States of America	74
C. Use of Bureau of Reclamation design standards in developing countries	75
D. Cross country transfer of technology	78
India: transfer of rotational distribution from northwest India to the southern states	79
Transfer of rotational irrigation from India to Thailand and Nepal	80
Indonesia: transfer of technology to user-managed systems	81
E. Conclusions	82
VIII. THE FORCES OF CHANGE	87
Response from farmers	89
Response from technology	90
Response from agricultural research	91
Response from the governments	92
IX. THE EXPLOSIVE EXPLOITATION OF GROUNDWATER RESOURCES	92
X. THE PLANNING PROCESS: A GLOBAL GAME PLAN	95
Definition of modern design	95
Principles of modern design	96

Proper objective	97
Water delivery	98
Configuration	99
Water control strategy	99
Guiding principles for selecting a control strategy and equipment	103
Modernization of existing schemes	109
Simulation of canal response for different scenarios	109
Centralized automatic control systems	110
XI. PARAMETERS INFLUENCING THE PLANNING AND DESIGN OF IRRIGATION PROJECTS	111
Water resources	112
Groundwater resources	112
Silt load	114
Rainfall	115
Soil conditions	115
Crop diversification	116
Existing infrastructure	117
Land tenure and consolidation	118
Management and technical capability: the field reality	120
Economics and maintenance costs	120
Institutional setup	121
Operational capabilities of irrigation agencies and user associations	122
Pricing and water allocation strategy	123
Capacity of the construction industry	123
XII. THE CHALLENGE OF MODERNIZATION: OPTIONS AND PROCEDURES	124
Infrastructure versus management inputs	124
Stepwise versus full-fledged modernization	125
The role of water users' associations in the modernization process	127
Financing of rehabilitation programmes: a few examples	127
Specific design issues	131
Hierarchy of canals	131
Control of seepage losses	133
XIII. A PROCESS FOR REVISING DESIGN PROCEDURES AND STANDARDS	135
Assess needs for change: the use of internal indicators	135
Development of new design procedures	138
Revision of design standards	139

Strategies for dissemination	140
<b>XIV. CONCLUSION: THE NEED FOR COUNTRY IRRIGATION POLICIES</b>	<b>141</b>
<b>REFERENCES</b>	<b>145</b>
<b>ANNEXES</b>	<b>149</b>
Annex 1: Planning a large irrigation project in the 1950-70 period	149
Annex 2: Abstracts from the FAO Guidelines for Planning Irrigation and Drainage Investment Projects	151
Annex 3: Conventional terms of reference for consulting services	153
Annex 4: Irrigation policy: modernization of water resources in Brazil	154
<b>FIGURES</b>	
Figure 1: A multi-tier user organization/agency of a surface irrigation system	49
Figure 2: Alternative configurations of canal automated systems	101
Figure 3: Complexity of different control strategies at design, construction and operation stages	103
Figure 4: Options for ease of operation and higher levels of service	105
Figure 5: Flow rate fluctuations through weir and orifice control structures	107
Figure 6: Combination of check and turnout structures	108
Figure 7: Land consolidation in an interventionist agricultural economy	119
Figure 8: A land consolidation model in a liberal agricultural economy	119
Figure 9: An irrigation project with a well-established hierarchy of canals	131
Figure 10: A typical irrigation system with a loose hierarchy of canals and a high number of direct outlets	132
Figure 11: Typical configuration of an irrigation system in Mid and South China	133
