PROCESS THEORY—KINETICS AND

SLUDGE QUALITY CONTROL

PETR GRAU, D.Sc.B. and JIRI WANNER, Ph.D.

1

Activated Sludge Process

1

Process Theory

2

Terminology and Classification of Microbial Systems

2

Microorganisms and Their Activities

4

Activated Sludge Separation Problems

16

Settling Properties of Activated Sludge

16

Evaluation of Settling and Foaming Properties of

Activated Sludges

17

Filamentous Microorganisms

20

Filamentous Microorganisms Growth Control

25

References

33

ACTIVATED SLUDGE TREATMENT OF

MUNICIPAL WASTEWATER—U.S.A. PRACTICE

37

MARK HSU, Ph.D., P.E., D.E.E. and THOMAS E. WILSON, Ph.D., P.E., D.E.E.

General Approach

37

Role of Designers

37

Effluent Criteria

37

Wastewater Characterization

38

Pre-treatment

38

Design Approach

39

Clarifier Design

40

Surface Overflow Rate

40

Depth 40
Circular versus Rectangular 41
Solids Loading 41
CSF Approach 42
Design MLSS 45
 Aeration Tank (Reactor) Design 46
 SRT 46
 Solids Yield 48
 Reactor Sizing 49
 Depth 49
 Secondary Treatment – BOD₅ Removal 49
 Nitrification 51
 Oxygen Requirements 53
 Percent Oxygen Transfer 55
 Air Requirements 56
 Pure Oxygen-Activated Sludge Plants 57
 Control of Settling Properties 58
 Nocardia Control 59
 Appurtenance Design 61
 Aeration Diffusers 61
 Return Sludge Pumps 62
 Waste Sludge Pumps 63
 Scum Removal Equipment 63
 Configurations 64
 Small Plants 64
 Medium-Sized Plants 64
 Large Plants and Tight Site Designs 65
 Water Reclamation Plants 65
 References 67

3. **EUROPEAN PRACTICES** 69

A. L. DOWNING, D.Sc., Fi.Chem.E.

Introduction 69
 Historical Perspective 70
 Process Design 71
 Models 78
 Dynamic Models 84
 The WRc-Jones Model 84
 IAWPRC AS Model No. 1 87
 Aeration Systems 87
 Diffused Air Plants 88

Mechanical Aerators 90
 "Hybrid" Systems 93
 Alternatives to the Main Types of Aeration Units 93
 The ICI Deep Shaft 93
 Oxygen AS Plants (OASP) 94
 Secondary Settlement 95
 Process Sequences 98
 Larger Populations 98
 Smaller Works 110
 Instrumentation, Control, and Automation (ICA) 118
 Some Other Process Variants 121
 Sequencing Batch Reactors 121
 Fluidized Beds 121
 Aerated Filters 121
 Rope-Type Biofilm Reactors 122
 Future Trends 123
 References 124

ACTIVATED SLUDGE TREATMENT OF

INDUSTRIAL WATERS 127
 W. WESLEY ECKENFELDER, D.Sc., P.E. and JACK L. MUSTERMAN, Ph.D., P.E.

Introduction 127
 Pretreatment of Industrial Wastewater 127
 Equalization 127
 Heavy Metals 129
 pH Neutralization 133
 Toxic Substances and Off-Gas Control 135
 Characterization of Industrial Wastewater 136
 Principles of Biological Oxidation 138
 Sludge Production 141
 Oxygen Requirements 144
 Nutrient Requirements 146
 Acclimation of Biological Sludges 148
 Kinetics of Organic Removal 150
 Plug-Flow Kinetics 152
 Complete Mix Kinetics 154
 Two-Stage Activated Sludge 155
 Removal of Specific Organics in the Activated Sludge Process 167
 Soluble Microbial Product Formation 173
 Activated Sludge Effluent Variability 176

Bioinhibition of the Activated Sludge Process	180
<i>OECD Method 209</i>	184
<i>Fed-Batch Reactor (FBR)</i>	185
<i>Glucose Inhibition Test</i>	186
<i>Inhibition of Nitrification</i>	188
Effect of Temperature	189
Sludge Quality Control	195
Stripping of Volatile Organics	207
Nitrification and Denitrification	210
Activated Sludge Processes	217
<i>Plug-Flow Activated Sludge</i>	219
<i>Selector Activated Sludge</i>	219
<i>Complete Mix Activated Sludge</i>	219
<i>Extended Aeration</i>	220
<i>Oxidation Ditch Systems</i>	221
<i>Intermittently Aerated and Decanted Systems</i>	221
<i>High Purity Oxygen Systems</i>	224
Treatment of Industrial Wastewaters in	
Municipal Activated Sludge Plants	228
<i>Effect on Effluent Quality</i>	229
<i>Effect on Sludge Quality</i>	230
<i>Effect of Temperature</i>	230
<i>Sludge Handling</i>	230
<i>Bioinhibition and Aquatic Toxicity</i>	230
<i>Nutrient (N and P) Requirements</i>	230
Application of Powdered Activated Carbon (PACT®)	231
Final Clarification	237
Effluent Suspended Solids Control	239
Laboratory and Pilot Plant Procedures for the Development	
of Process Design Criteria	247
<i>Reactor Operation</i>	248
Activated Sludge Design Procedure for Soluble Wastewater	
Using Complete Mix Activated Sludge	251
<i>Data Required</i>	251
<i>Calculation of the Required Aeration Volume</i>	252
<i>Calculation of the Effluent COD</i>	253
<i>Sludge Production</i>	253
<i>Oxygen Requirements</i>	254
<i>Nutrient Requirements</i>	254
<i>Secondary Clarifier Design</i>	255

Table of Contents ix

Design Procedure for a Wastewater Containing
Degradable Influent Volatile Suspended Solids 259
Additional Data Required 259
The Procedure 260
Design for Priority Pollutant Removal 261
