## Treatment effects on the chemical and toxicological characteristics of leachates from contaminated sites

Fate prediction of selected organic compounds in bioreactors

A study initiated from COST Project 641

Prepared by:

**B. Neergaard Jacobsen** (Project coordinator)  
Water Quality Institute (DK)

**G. Becher**

Department of Environmental Medicine  
National Institute of Public Health (N)

**B. K. Jensen**

Department of Environmental Engineering  
Technical University of Denmark (DK)

**S. Monarca**

Chair of Environmental Health  
School of Medicine  
University of Brescia (I)

**H. Scholz-Muramatsu**

Institute for Sanitary Engineering  
University of Stuttgart (D)

**J. Struijs**

Laboratory for Ecotoxicology  
National Institute of Public Health and Environmental Protection (NL)

Contract No EV4V-0206-DK

VKI Project No 655002

April 1992

**Final report**

LIST OF CONTENTS	III
LIST OF TABLES	VII
LIST OF FIGURES	VIII
PREFACE	1
1. INTRODUCTION	2
1.1 Contamination of groundwaters	2
1.2 Treatment of leachates and contaminated groundwaters	3
1.3 Framework of the project	5
1.4 Components of the report	7
2. OBJECTIVE	8
3. TERMINOLOGY	9
3.1 Physical phase transfer processes and mechanisms	9
3.2 Degradation processes and mechanisms	11
3.3 Toxicity	13
3.4 Notation	14
4. SIGNIFICANT REMOVAL PROCESSES IN BIOREACTORS	16
4.1 Introduction	16
4.2 Physical phase transfer	21
1. Sorption and desorption	
2. Stripping	
4.3 Abiotic degradation	26
1. Photolysis	
2. Hydrolysis	
3. Redox behavior	
4.4 Biodegradation reactions	33
1. Oxidation	
2. Reduction	
3. Hydrolysis	
4. Community interactions	
5. TOXICITY OF CONTAMINANTS IN GROUND AND DRINKING WATER	33
5.1 Estimating noncarcinogenic toxicity	33
1. Acute toxicity	
2. Chronic toxicity	
3. Risk Assessment	

	Page
5.2 Estimating cancer risk	34
1. Hazard identification	
2. Risk characterization	
3. Quantitative risk estimate for drinking water carcinogens	
5.3 Standards and guidelines	37
<b>6. SELECTION OF COMPOUNDS</b>	
6.1 Compounds frequently detected	38
6.2 Selection criteria	41
6.3 Compound candidates	41
6.4 Selected compounds	42
<b>7. DATA FROM LITERATURE FOR SELECTED COMPOUNDS</b>	
7.1 Physical and chemical properties	44
7.2 Use of compounds and occurrence in ground and drinking waters	45
7.3 Physical phase transfer	48
1. Suspended solids / water	
2. Air / water	
7.4 Rate constants for modelling abiotic degradation	49
7.5 Rate constants for modelling biodegradation	50
7.6 List of possible intermediate products	58
7.7 Data for toxicity and drinking water standards	58
1. Toxicity and health risk elements	
2. Drinking water standards	
<b>8. MATHEMATICAL MODELS</b>	
8.1 Modelling concepts	61
8.2 Box model	61
1. Application to bioreactors	
2. Specification of the relevant processes	
3. Design of a box model of the fate of a chemical in a reactor	
8.3 A non-linear mechanistic reactor model	65
<b>9. COMPARISONS BETWEEN FATE OF SELECTED COMPOUNDS IN BIOREACTORS PREDICTED FROM LITERATURE DATA AND OBSERVED BY MONITORING</b>	
9.1 Monitoring data from bioreactor studies	68
9.2 Modelling of fate of selected compounds	69
9.3 Comparison of compound removal	70
9.4 Toxicological evaluation of bioreactor effluents	74
<b>10. CONCLUSIONS</b>	75

	Page
11. RECOMMENDATIONS	
11.1 Feasibility of collecting, organizing and storing process rate constants in databank files	77
11.2 Identification of research needs	78
12. ACKNOWLEDGEMENT	80
13. LIST OF REFERENCES	81

#### APPENDICES

1. Contact addresses to project participants	93
2. Data sheets: Experimental results for biodegradation	95
3. Data sheets: Monitoring results from bioreactor studies	115
4. Simulation runs: Box model	123
5. Simulation runs: Mechanistic model	139
6. Notation	163
