

# Dredging and marine environment

Editor  
Claude Alzieu

**Ifremer**

# Contents

---

<b>Foreword</b>	8
<b>Introduction - Environmental impacts of port dredging</b>	
<i>Claude Alzieu</i>	
<b>Amounts of dredged sediments</b>	17
<b>Fate of dredge spoils</b>	19
<b>International conventions</b>	19
<b>French regulations: fundamental texts</b>	20
<b>Risk assessment</b>	22
<b>Monitoring of port areas</b>	23
Bibliographic references	24
<b>Chapter I - Contaminants in sediments</b>	
<i>Claude Alzieu, Pierre Michel, Jean-François Chiffolleau, Bernard Boutier, Alain Abarnou</i>	
<b>Arsenic</b>	29
Sources	29
Geochemical behaviour	30
Environmental levels	30
Toxicity	30
<b>Cadmium</b>	31
Sources	31
Geochemical behaviour	31
Environmental levels	32
Toxicity	33
<b>Chromium</b>	33
Sources and fluxes	33
Geochemical behaviour	34
Environmental levels	35
Toxicity	35
<b>Copper</b>	35
Sources	35
Geochemical behaviour	36
Environmental levels	36
Toxicity	37
<b>Mercury</b>	37
Sources	37
Geochemical behaviour	38
Environmental levels	38
Toxicity	38

<b>Nickel</b>	39
Sources and fluxes	39
Geochemical behaviour	39
Environmental levels	40
Toxicity	41
<b>Lead</b>	41
Sources and fluxes	41
Geochemical behaviour	41
Environmental levels	42
Toxicity	42
<b>Zinc</b>	42
Sources	42
Geochemical behaviour	43
Environmental levels	43
Toxicity	43
<b>Tributyltin</b>	44
Sources and fluxes	44
Geochemical behaviour	44
Environmental levels	44
Toxicity	45
<b>Polychlorobiphenyls (PCBs)</b>	45
Nature and use	45
Sources and fluxes	46
Fate and distribution	47
Environmental levels	47
Toxicity	48
<b>Polyaromatic hydrocarbons (PAHs)</b>	48
Origins and sources	48
Geochemical behaviour	49
Environmental levels	50
Toxicity	50
Bibliographic references	50

## **Chapitre II - Biotic indices in sedimentary environments**

---

*Michel Glémarec*

<b>Introduction</b>	61
<b>The SAB model (species richness, abundance, biomass) of Pearson &amp; Rosenberg</b>	62
<b>Model based on ecological groups and biotic indices</b>	64
<b>Environmental meaning of the biotic index</b>	69
<b>Many indicators, but few indices as clues</b>	70
<b>Indices of biotic integrity or indices of condition</b>	72
<b>Conclusion</b>	73
Bibliographic references	74

### **Chapitre III - The I2EC, Index for evaluation of the coastal endofauna**

---

*Jacques Grall, Michel Glémarec*

<b>Abstract</b>	81
<b>Introduction</b>	81
<b>Methodology</b>	82
Sampling design	82
Sampling dates	82
Environmental parameters	82
Biological data	83
Data analysis	83
Determination of the I2EC	84
<b>Application of the bioevaluation method</b>	86
Fish farm impact on the neighbouring benthos	86
Bioassessment of harbour sediments on the French coast	88
<b>Discussion</b>	90
Bibliographic references	92

### **Chapitre IV - An integrated approach to impact assessment: risk scores, toxicity assays, biotic indices**

---

*Claude Alzieu, Françoise Quiniou, Régis Delesmont*

<b>Introduction</b>	97
<b>Risk analysis</b>	98
<b>Integrated approach</b>	99
The "Triad" concept	99
Characterization of total toxicity in sediments	99
Identification of standard sediments	100
Selection of toxicity assays	101
<b>Conclusion</b>	104
Bibliographic references	105
Annex - Chemical, toxicological and biological data of type sediments	107

### **Chapitre V - Monitoring of contaminant inputs in dumping sites at sea**

---

*Bruno Andral, Claude Alzieu, Martial Huet*

<b>Context</b>	111
<b>Inputs</b>	111
From the plume	111
From deposited sediment	113
Assessment of inputs	114
<b>Biomonitoring of inputs</b>	114
Based on contamination levels	114
Based on specific biological effects	115

<b>Application of bioindicators to dumping areas</b>	116
Experimental protocols of active biomonitoring	116
Sentinel species	116
Mussel exposure device	116
Exposure time	117
Sampling protocol	118
Treatment of mussel specimens	118
Determination of imposex in gastropods	119
<b>Typical case study: biomonitoring in the Fos area (Mediterranean)</b>	120
Characteristics of the dumping area	120
Monitoring strategy	121
Results and conclusions	123
<b>Conclusion</b>	126
Bibliographic references	127
