

# 2ND INTERNATIONAL CONFERENCE ON Water Pipeline Systems

*Edited by D S Miller*

---

BHR Group Conference Series  
Publication No.10

---

Papers presented at the *2nd International Conference on Water Pipeline Systems*, organized and sponsored by BHR Group Limited, and held in Edinburgh, Scotland, UK, on 24–26 May 1994.

Mechanical Engineering Publications Limited  
LONDON

F 7148

## CONTENTS

### PREFACE

### TRANSIENT SIMULATION

Estimating unsteady friction in transient cavitating pipe flow 3  
*A Bergant, Litostraj - Turbine Factory, Slovenia; A R Simpson, The University of Adelaide, Australia*

The influence of support rigidity on waterhammer pressures and pipe stresses 17  
*A G T J Heinsbroek, Delft Hydraulics, The Netherlands; A S Tijsseling, University of Dundee, UK*

Dynamic simulation and optimisation of hydraulic system with a check valve 31  
*Y Xu, B Jones, Birmingham University, UK; L Ji, Shanxi Mining Institute, P R China*

### FAILURE

Pipe damage due to air pockets in low pressure piping 43  
*A Kottmann, ehem TWS, Germany*

GIS development with application to cast iron water main breakage rates 53  
*P Jacobs, PipSys Consulting; B Karney, University of Toronto, Canada*

A new probability distribution to model water main breakage patterns 63  
*J W Davidson, I C Goulter, University of Central Queensland, Australia*

### PIPELINE MATERIALS SPECIFICATION

Renovation using thin walled plastic liners 75  
*J Morris, WRc Swindon; J Boot, University of Bradford, UK*

Buried pipes structural design 91  
*R C Prevost, Consultant, France*

The use of capacitance microscopy as a means of monitoring "static & dynamic" strain in non-bonded flexible pipe structures 115  
*G C Knight, University Bradford/McDermott Engineering Europe Ltd, UK*

Polyethylene materials for pipeline systems 135  
*S H Beech, BP Chemicals, UK*

North West Water & the use of plastic pipes for larger diameter mains 149  
*J S Osborne, North West Water, UK*

Computerised pipe selection for water networks 167  
*K Morley, Pipeline Developments Ltd; D Pearson, North West Water Ltd, UK*

Developments in thermoplastics pressure pipe systems - "molecular oriented PVC pipes" 181  
*J E Brown, Uponor Limited, UK*

Pipe-soil interaction with flexible pipe 203  
*D Stephenson, University of the Witwatersrand; A King, DPI, South Africa*

## **REHABILITATION**

Remote sensing pipeline rehabilitation methodologies based upon the utilization of infrared thermography 217  
*G J Weil, R J Graf, L M Forister, EnTech Engineering Inc, USA*

The refurbishment of Hilton House Tunnel 231  
*N Bullen, North West Water Ltd, UK*

The development of die drawing to rehabilitate large diameter pipelines 245  
*G T Perrett, North West Water Limited, UK*

Recent field trials and quality testing of soft-lining cured-in-place techniques for the renovation of the wastewater network 267  
*D A Shephard, NWW Engineering, UK*

## **NETWORK SIMULATION**

Steady flows in pipe networks - an alternative approach 283  
*A Vardy, Z Pan, University of Dundee, Scotland*

Network simulation modelling - a tool in rehabilitation planning 299  
*W G Wright, M Billing, Parkman Consulting Engineers, UK*

Pipeline optimisation via genetic algorithms: from theory to practice 309  
*A R Simpson, University of Adelaide, Australia; D E Goldberg, University of Illinois, USA*

Performance analysis of water distribution systems 321  
*P W Jowitt, S T Coehlo, Heriot-Watt University, UK*

## OPERATION

- Hydraulic instability in water supply networks 335  
*J Ellis, Hydraulics Consultant, UK*
- Flow regulation in complex water distribution networks: towards a complete description of the hydraulic characteristics of regulating devices 359  
*N Romano, University of Naples "Federico II", Italy*
- Mathematical modelling of water demand 371  
*D Alitckov, G Dimitrov, University of Architecture, Civil Engineering and Geodesy, Bulgaria*
- Calibration of roughness in water distribution networks 379  
*G B Ferreri, E Napoli, A Tumbiolo, University of Palermo, Italy*
- Pipeline leakage in a developing country 397  
*N M Usher, Entec Europe Ltd, UK*

## WATER QUALITY

- An explicit algorithm for modeling distribution system water quality with applications 405  
*P F Boulous, A K Dhingra, Montgomery Watson; T Altman, University of Colorado at Denver; R W Bowcock, City of Azusa, USA; F Collevati, SAFEGE, France*
- Comprehensive hydraulic analysis of water distribution systems 425  
*B Karney, University of Toronto; P Jacobs, PipSys Consulting, Canada; D McInnis, Hong Kong University of Science and Technology, Hong Kong*
- Contamination of potable water by lead from leaded copper alloys 435  
*R J Oliphant, WRc plc, UK*

## TRANSIENT OPERATION

- Daily management of irrigation pipe networks: water hammer pressure surges and happened damages 451  
*B Brunone, University of Perugia; A Carravetta, University of Napoli "Federico II", Italy*
- Dynamic characteristics for damped check valves 459  
*A C H Kruisbrink, Delft Hydraulics, The Netherlands; A R D Thorley, City University, UK*

Performance of a flow control valve in unsteady flow <i>G de Marinis, U M Golia, University of Napoli "Federico II", Italy</i>	477
Design and full-scale tests of anti-waterhammer air vessels in a large transmission pipeline system <i>O B Björnsson, Þ Jóhannesson, Fjarhitun hf, Iceland</i>	491
Hydraulic transients due to check valve closure in a pump system <i>A Adamkowski, Polish Academy of Sciences, Poland</i>	511
Proposal of water hammer control device in a low pressure loop system: study and interpretation of experimental data <i>O Giustolisi, M Mastrorilli, Bari Polytechnic, Italy</i>	525
