Forew	ord		xi
Prefac	e		xiii
Ackno	wledger	ments	xv
Nomer	ıclature		xvii
1. Intr	oductio	on .	1
1.1	Optica	al water quality	1
1.2	'Aqua	ttic optics' — the behaviour of light in water	3
1.3		and purpose of the book	4
1.4	Struct	ure of the book	5
2. Con	cepts		9
2.1	Introd	uction—water as an optical medium	9
2.2	Inhere	11	
2.3	Appar	rent optical properties of water	14
2.4		attenuating constituents of water	17
		Water itself	18
	2.4.2	Suspensoids	20
	2.4.3	Phytoplankton	26
	2.4.4	Organic detritus and yellow substance	28
2.5	Clarity	y of waters	30
	2.5.1	Visual clarity	31
	2.5.2	Light climate for aquatic plants	34
2.6	Water	colour	38
	2.6.1	Intrinsic water colour	38
	2.6.2	Irradiance reflectance	41
		The concent of colour applied to water	11

vi Table of contents

		2.6.4	Chromaticity	43
	2.7	Synthe	sis	48
2	Mea	sureme	nf	49
•	3.1			49
	3.2	Introduction Apparent optical properties		50
	J. 2		Vector irradiance	52
			Scalar irradiance and spectral irradiance	56
	3.3		nt optical properties	58
			Beam attenuation	58
		3.3.2	Absorption measurements by spectrophotometer	60
		3.3.3	*	64
		3.3.4	Estimation of the IOPs from measurement of the AOPs	68
	3.4	Water	clarity	71
		3.4.1	•	71
		3.4.2	The black disc	72
		3.4.3	Light penetration into water bodies	76
	3.5	Water	colour	78
		3.5.1	Traditional measures of water 'colour'	78
		3.5.2	Brightness	79
		3.5.3	Chromaticity analysis	79
		3.5.4	Matching water colour	83
	3.6		ninants of water colour and clarity	84
		3.6.1	Yellow substance	84
		3.6.2	Suspended solids	85
		3.6.3	Phytoplankton	89
		3.6.4	Detritus	91
	3.7	-	l monitoring of water quality	92
		3.7.1	Suspended solids	92
		3.7.2	Organic matter	93
		3.7.3	Remote sensing	94
4.	Colo	our and	clarity in different aquatic environments	97
	4.1	· -		
		4.1.1	Lakes	98
		4.1.2	Rivers	98
		4.1.3	Estuaries	99
	4.2	Lakes		100
		4.2.1	Sources of light-attenuating constituents	100
		4.2.2	Traditionally measured optical properties	101
		4.2.3	Absorption and scattering	107
		4.2.4	Lakewater appearance	109
		4.2.5	Underwater light for plant growth	112
	4.3	Rivers		115
		4.3.1	Light-attenuating constituents of river waters	115
		4.3.2	Visual clarity	118

			Table of content	nts vii
		4.3.3	Light penetration	124
		4.3.4	Colour	125
	4.4	Estuar	ies	129
		4.4.1	Suspended solids and the turbidity maximum	130
		4.4.2	Light absorption in estuaries	130
		4.4.3		132
		4.4.4	Light climate for plant growth	136
	4.5	Compa		138
5.	Mar	naging c	olour and clarity	144
	5.1	Introdu		144
	5.2	Reviev	v of international criteria and guidelines	145
		5.2.1	Aesthetics and recreational water use	146
		5.2.2	Protection of aquatic life	149
		5.2.3	Other uses	151
	5.3	Develo	opment of improved guidelines for optical water quality	152
		5.3.1	Philosophy	152
		5.3.2	Visual clarity	153
		5.3.3	Light penetration	156
		5.3.4	Colour	158
		5.3.5	Summary of the guidelines	161
		5.3.6	Implementation of the guidelines	163
	5.4	Point d	ischarges of light-attenuating materials	167
		5.4.1	Urban stormwater	167
		5.4.2	Municipal sewage	170
		5.4.3	Waste stabilization pond effluents	172
		5.4.4	Meat processing wastewaters	173
		5.4.5	Pulp and paper wastewaters	174
		5.4.6	Mining wastewaters	175
		5.4.7	Other point discharges	177
	5.5	Control	of suspended solids from soil erosion	178
		5.5.1	Philosophy	179
		5.5.2	Factors affecting soil erosion	181
		5.5.3	Construction and surface mining	186
		5.5.4	Agriculture and forestry	188
	5.6	Control	of phytoplankton	192
		5.6.1	Phytoplankton targets for lakes	192
		5.6.2	In-lake control of biomass	195
		5.6.3	Control by nutrient reduction	196
ó.	Case	studies		200
	6.1	Introduc	ction	200
	6.2	Lake Co	oleridge: effects of turbid glacial waters on optical water quality	201
		6.2.1	Background	201
		6.2.2	Methods	203
		6.2.3	Optical character of Lake Coleridge	203

viii Table of contents

6.2.5 Optical model for Lake Coleridge — interred changes in optical character 6.3 Lake Whangape: changed optical quality linked to macrophyte decline 6.3.1 Background 6.3.2 Macrophytes 6.3.3 Suspended solids and the light climate 6.3.4 Collapse of the macrophyte stands 6.4.1 Background 6.4.2 Optical quality monitoring 6.4.3 Water quality and light attenuation in two contrasting lakes 6.4.1 Background 6.4.2 Determinants of light attenuation 6.4.3 Discussion 6.5 Lake Horowhenua: changes in optical water quality following sewage effluent diversion 6.5.1 Background 6.5.2 Monitoring 6.5.3 Findings 6.5.4 Discussion 6.6 Tarawera River: effects of Kraft effluent on optical water quality 6.6.1 Background 6.6.2 Characterisation of the optical quality impacts 6.6.3 Detectability of change in river water colour 6.7 Whanganui River: effects of tributary diversion on optical water quality 6.7.1 Background 6.7.2 Methods 6.7.3 Results of the monitoring programme 6.7.4 Effects of the diversions on river water clarity and colour 6.7.5 Discussion 7. References			244
Appendix 1	Radiati Referer	on quantities and description of the light field in water	266 270
	Referen	ices	2.0
Appendix 2	Measur	rement recipes	271
	A 2.1	Measurement of underwater irradiance profiles	271
	A 2.2	Measurement of underwater beam transmittance for the cal- culation of beam attenuation coefficient	273
	A 2.3	Absorption and scattering measurement by spectrophotometer. Part 1: absorption of dissolved organics ('colour' measurement) (yellow substance, <i>Gelbstoff</i> , gilvin)	275
	A 2.4	Absorption and scattering measurement by spectrophotometer. Part 2: spectral absorption of total water constituents	277
	A 2.5		279
	A 2.6	Absorption and scattering measurement by spectrophotometer. Part 4: scattering measurements	281
	A 2.7	Nephelometric turbidity measurement	282
	A 2.8	Measurement of visual water clarity by Secchi disc	284
	A 2.9	Measurement of visual water clarity using a black disc	
	A 2 10	('black spot'). Part 1: in situ measurement Measurement of visual water clarity using a black disc	285
	A 2.10	('black spot'). Part 2: off-site measurement in a trough	288
	Δ 2 11	Colour (hue) observations	289
	Referen		291
Appendix 3	Dischai	rge of light-attenuating effluents to a river: worked exam-	
	ple calc	culations	293
	Probler	n 1: discharge of clays from a settling pond	293
	Probler	m 2: discharge of Kraft pulp mill effluent	297
	Referen	nces	300
