1995

Guidance Document for Risk Assessment of Industrial Waste Water

Finn Pedersen
Axel Damborg
Preben Kristensen

Ministry of Environment and Energy, Denmark
Danish Environmental Protection Agency

Table of Contents

1	Introduction	7
1.1	Objective and delimitation	7
1.2	Statutory basis	8
1.3	Evaluation of whole effluent and individual substances	10
1.4	Stepwise investigation programme	11
1.5	The structure of the report	12
2	Evaluation of environmental hazard	13
2.1	Evaluation principle	13
2.2	Whole effluent	15
2.2.1	Determination of PNEC	15
2.2.2	Determination of PEC	17
2.2.3	Risk assessment	19
2.3	Individual substances in the waste water	20
2.3.1	Water quality criteria	21
2.3.2	Calculation of PEC for single substances	21
2.3.3	Bioaccumulative substances	21
2.3.4	Risk assessment	23
3	Initial wastewater evaluation	25
3.1	The composition and properties of the waste water	25
3.2	Conditions in the recipient	25
3.3	Initial environmental risk assessment	25
4	Wastewater evaluation, level I	29
4.1	Composition and variability of the waste water	29
4.2	Spreading and distribution in the recipient	30
4.3	Degradability	32
4.4	Bioaccumulation	35
4.5	Toxicity	35
4.6	Environmental risk assessment	36
5	Wastewater evaluation, level II	39
5.1	The composition and variability of the waste water	39
5.2	Spreading and distribution in the recipient	41
5.3	Degradability	44
5.4	Bioaccumulation	45
5.5	Toxicity	46
5.6	Environmental risk assessment	49
6	Establishing criteria for the discharge of waste water	51

6.1	Establishment of criteria after initial evaluation	51
6.2	Establishment of criteria for whole effluent	52
6.3	Establishment of conditions for individual substances	54
7	Monitoring compliance	56
Appendix 1:	Terminology and abbreviations	59
Appendix 2:	Summary of discharge threshold limits and water quality criteria for environmentally hazardous chemical substances	62
Appendix 3:	Recommended test guidelines	67
Appendix 4:	Dilution and spreading models	72
