Published for the International Council of Scientific Unions
with financial assistance from UNESCO through a 1992/1993 subvention

IAHS Special Publication No. 3

April 1995

IAHS Special Publication No. 3

Published by the International Association of Hydrological Sciences
in cooperation with the Ruhr University Bochum

ISBN 0-947571-24-8

Executive Editor for the Series:
H. Salz,
Former General Secretary of
the International Institute for Infrastructural,
Hydraulic and Environmental Engineering,
Delft, The Netherlands

This IAHS Special Report is available *only* from:
IAHS Press, Institute of Hydrology, Wallingford,
Oxfordshire OX10 8BB, UK

Printed in The Netherlands by Krips Repro, Meppel.

CONTENTS

LIST OF TABLES vii

LIST OF ACRONYMS vii

1 INTRODUCTION 1

2 OVERVIEW OF EXISTING LAND-SURFACE SCHEMES FOR AGCMs 5

2.1 INTRODUCTION 5

2.2 DESCRIPTION OF LAND-SURFACE PARAMETERIZATION (LSP) TO BE USED IN ATMOSPHERIC GLOBAL MODELS 6
2.2.1 Hydrological components of NWP models 6
2.2.1.1 The NMC model 7
2.2.1.2 More advanced NWP models (ISBA, ECMWF, UK Met Office) 7
2.2.2 Advanced LSP for ACGMs 9
2.2.2.1 Deardorff scheme 10
2.2.2.2 SiB/SSiB 10
2.2.2.3 BATS/BEST scheme 11
2.2.2.4 GISS scheme 13
2.2.3 Snow parameterization 13
2.2.3.1 Simple models 13
2.2.3.2 More complex models 14

2.3 SUB-GRID HETEROGENEITY 15

2.4 DATA REQUIREMENTS 18
2.4.1 Surface parameters 18
2.4.2 Assimilation of soil moisture 20
2.4.3 Major field experiments 21
2.4.4 Global validation data 22

3 LARGE-SCALE HYDROLOGICAL MODELLING 30

3.1 INTRODUCTION 30

3.2 OVERVIEW OF HYDROLOGICAL MODELLING 30
3.2.1 Background of hydrological modelling 30
3.2.2 Hydrological processes in river basins 31
3.2.3 Classification of hydrological approaches to river basin modelling 34
3.2.3.1 Routing models 34
3.2.3.2 Rainfall-runoff models 35
3.2.4 Engineering applications of hydrological modelling 38
3.2.4.1 Short term forecast: Flood forecasting 39
3.2.4.2 Long-term forecast: Water balance models 39
3.2.5 Scales in hydrology 40
3.2.5.1 Scale of modelling area 40
3.2.5.2 Time scale 41
3.2.6 Requirements of long-term predictions 41

3.3 EXISTING APPROACHES TO LARGE SCALE MODELLING IN HYDROLOGY 42
3.3.1 Examples of large-scale "water balance"- models 42
3.3.1.1 RHINEFLOW 43
3.3.1.2 WBM / WTM (Water Balance and Water Transport Model) 44
3.3.2 CAMOS/EGMO (Catchment modelling system) 45
3.3.3 River Arno scheme 46
3.3.4 TOPMODEL 47
3.3.5 The SHE (Système Hydrologique Européen) -model 48
3.3.6 PRMS (Precipitation-Runoff Modelling System) - nested model approach 50

3.4 LAND SURFACE PARAMETERIZATIONS FOR CLIMATE MODELLING 51
3.4.1 Representation of hydrological processes presently used in many GCMs/NWP- models (point of view of hydrology) 51
3.4.2 Statistical-Dynamical Approaches to Represent the Subgrid-scale Heterogeneities in Atmospheric Models 53
3.4.2.1 Approach of Entekhabi and Eagleson 53
3.4.2.2 Approach of Famiglietti and Wood 54
3.4.2.3 Approach of Avissar 55
3.4.2.4 "Bendy" bucket-approach 55
3.4.2.5 Résumé of chapter 3.4.1 to 3.4.2.4 56
3.4.3 Examples of new "hydrological" parameterizations for climate modelling 57

3.5 DATA 59
3.5.1 Observational studies and field experiments 59
3.5.2 Remote sensing of surface parameters for large-scale hydrology 59
3.5.3 Global observing systems relevant to hydrology 60

4 COUPLING OF HYDROLOGICAL AND ATMOSPHERIC MODELS 65

4.1 INTRODUCTORY REMARKS 65

4.2 WATER BUDGET OF LARGE CONTINENTAL AREAS 66

4.3 COMPARISON AND VALIDATION OF DATA 69
4.3.1 Precipitation estimates 69
4.3.2 Runoff estimates 70

4.4 FUTURE MODELLING WORK 72

4.5 FUTURE FIELD EXPERIMENTS 73

4.6 A FEW OUTSTANDING PROBLEMS 78

5 STATEMENTS AND DISCUSSIONS OF THE GEWEX WORKSHOP ON THE HYDROLOGY IN ATMOSPHERIC MODELS 82

5.1 INTRODUCTORY REMARKS 82

5.2 STATEMENTS 83

5.3 DISCUSSIONS 87

5.4 LIST OF PARTICIPANTS 89

6 CONCLUSIONS AND RECOMMENDATIONS 90

6.1 LAND SURFACE PARAMETERIZATION 90

6.2 CONSIDERATION OF LAND SURFACE HETEROGENEITY 90

6.3 HYDROLOGICAL MODELLING IN AGCMS 91
6.3.1 Soil Moisture 92
6.3.2 Model Calibration and Validation 92
6.3.3 Scale Problems 92

6.4 COUPLING OF MACRO-SCALE HYDROLOGICAL MODELS WITH AGCMS 93

6.5 SPECIAL PROBLEM AREAS IN GCM MODELLING 94

6.6 GLOBAL DATA SETS 95

6.7 UNSOLVED PROBLEMS AND RESEARCH REQUIREMENTS 95

LIST OF TABLES

Table 2.1 Global data sets of soil/vegetation parameters
Table 2.2 Field experiments used for validating land surface models
Table 2.3 Global/continental scale validation data for GCMs
Table 3.1 Definition of scales in hydrology
Table 4.1 Current temporal and spatial resolution of NWP and climate models

LIST OF ACRONYMS

AGCM	Atmospheric General Circulation Model
BATERISTA	Biosphere-Atmosphere Transfers and Ecological Research In Situ Studies
BATS	Biosphere Atmosphere Transfer Scheme
BEST	Bare Essentials of Surface Transfer
BOREAS	Boreal Ecosystems Atmosphere Study
DWD	Deutscher Wetterdienst
DEM	Digital Elevation Model
ECMWF	European Centre for Medium-Range Weather Forecasts
EOS	Earth Observing System
FIFE	First ISLSCP Field Experiment
GAME	GEWEX Asian Monsoon Experiment
GARP	Global Atmospheric Research Programme
GATE	GARP Atlantic Tropical Experiment
