

W.Calmano, U.Förstner (Eds.)

Sediments and Toxic Substances

Environmental Effects and Ecotoxicity

With 106 Figures and 50 tables

Springer

Table of Contents

INTRODUCTION

1	Sediment Quality Assessment: Chemical and Biological Approaches	
1.1	Introduction	1
1.2	Chemical Methods	3
1.3	Integrated Chemical and Biological Methods	14
1.4	Tiered Sediment Assessment Strategy	26
1.5	Conclusions	29

LABORATORY STUDIES

2	The Influence of Diagenetic Processes on the Exchange of Trace Contaminants at the Sediment–Water Interface	
2.1	Introduction	37
2.2	Materials and Methods	38
2.3	Results and Discussion	40
3	Interaction of Pesticides with River Sediments and Characterization of Organic Matter of the Sediments	
3.1	Introduction	51
3.2	Experimental	53
3.3	Results and Discussion	57
3.4	Conclusion	87
4	Partitioning Behaviour of Phenols Between Water and Hydrophilic/Hydrophobic Interfaces	
4.1	Introduction	91
4.2	Fundamentals	92
4.3	Adsorption of Phenols on Hydrophilic Mineral Surfaces ..	94
4.4	Sorption of Phenols on Coated Surfaces	96
4.5	Adsorption of Colloidal Particles on Surfaces	100
4.6	The Partition Coefficient: k_D	105
4.7	Concluding Remarks	112

5	Sorption Properties of Biofilms	
5.1	Introduction	115
5.2	Composition and Properties of Biofilms	116
5.3	Biofilms and Sorption	124
5.4	Sorption Sites in Biofilms	131
5.5	Remobilization	145
5.6	Concluding Remarks	147
6	Ecotoxicity of Certain Heavy Metals Affecting Bacteria-Mediated Biogeochemical Pathways in Sediments	
6.1	Introduction	159
6.2	Heavy Metal Resistance of Bacteria	160
6.3	The Gap Between Microbial Physiology and Ecology ...	163
6.4	Influence of Cd, Hg, and Cu on Some Key Measures of Microbiological Sediment Analysis	164
6.5	Conclusions	170
7	Bioassays on Sediment Toxicity	
7.1	Introduction	179
7.2	Ecological Requirements	180
7.3	Organismic Responses in Sediments and Impacts of Environmental Stressors	182
7.4	Enzymatic Inhibition (Cholinesterase) in Sediment Organisms	184
7.5	Genetic Damage	190
7.6	Ecological Relevance of Biological Responses in Sediments	192
7.7	Recommendations	194
 FIELD STUDIES		
8	Trace Element Diagenesis in Polluted Sediments of the River Elbe Estuary	
8.1	Introduction	197
8.2	Materials and Methods	199
8.3	Results and Discussion	201
8.4	Conclusions	211
9	Mercury Distribution and Speciation in a Polluted Fluvial System	
9.1	Introduction	215
9.2	Results	217
9.3	Conclusions	236

10	Organotin Compounds in Sediments of the Rivers Elbe and Mulde	
10.1	Introduction	245
10.2	Organotin Compounds in Elbe and Mulde Sediments	250
10.3	Analytical and Chemical Methods – Species Analysis	260
10.4	Conclusions	263
MODELLING ASPECTS		
11	Advective Transport of Interacting Solutes: The Chromatographic Model	
11.1	Introduction	271
11.2	Transport Equations	272
11.3	Riemann Problem and Centred Waves	273
11.4	Analytical Integration of Transport Equations	277
11.5	Coherence Conditions, Rankine-Hugoniot Relation and Retardations	278
11.6	The Jacobian and the Retardation Matrix.	281
11.7	Topology of Waves for Multicomponent Langmuir-Type Isotherms	282
11.8	Waves in Two-Component Systems	291
11.9	Barrier Against Remobilization of a Contaminant	297
11.10	Conclusions	299
	Appendices	301
	Glossary of Notation	324
	SUBJECT INDEX	329
