Water Supply, Sanitation and Hygiene Education

Report of a Health Impact Study in Mirzapur, Bangladesh

by K.M.A. Aziz, B.A. Hoque, S.R.A. Huttly,
K.M. Minnatullah, Z. Hasan, M.K. Patwary,
M.M. Rahaman, and S. Cairncross

Water and
Sanitation
Report
Series

UNDP World Bank
Water and Sanitation
Program

Table of Contents

Preface	ix
Executive Summary	xi
1. Historical Antecedents	1
Health impacts of water supply and sanitation	2
Methodological problems	4
When are health impact studies worthwhile?	5
Rationale of the Mirzapur study	6
2. The Project and its Setting	9
Bangladesh: floods, disease, and hunger	9
Water supply in Bangladesh	10
The Mirzapur project	11
Baseline data	14
Water sources	18
Excreta disposal	20
3. The Interventions	23
Handpumps	23
Latrines	25
Hygiene education	27
Costs and replicability	32
4. Data collection: Intermediate Variables	35
Census and demographic surveillance	35
Measurement of water consumption	36
Water quality testing	36
Monitoring of latrine performance and use	37
Knowledge, attitude, and practice (KAP) surveys	37
Observation	37
Water and sanitation survey	38
Socioeconomic survey	38
5. Intermediate Variables: Results	39
Choice of water source	39
Quantities of handpump water used	41
Water quality	46
Water storage	47
Performance and maintenance of latrines	47
Use of latrines	51
Defecation hygiene	52

6. Impact on Diarrheal Disease	57
Methods	57
Comparison of intervention and control areas	59
Seasonality	60
Individual villages	62
Age-specific impact	63
Effect of recording absence of children	65
Factors within the intervention area	65
7. Impact on Nutritional Status	71
Methods	71
Comparison of Intervention and Control Areas	71
Subgroups within the Intervention Area	74
8. Discussion and Conclusions	77
Impact on diarrheal disease	77
Intestinal worms	80
Nutritional status	81
Mortality	82
Policy implications	83
References	87

Figures

Fig. 2.1	Location of study sites	14
Fig. 2.2	Sketch map of intervention area	16
Fig. 2.3	Sketch map of control area	17
Fig. 2.4	Proportions of households in intervention area (I) and control area (C) using various types of water source for different purposes in dry and wet seasons, at time of baseline survey	19
Fig. 2.5	Proportion of households in intervention area (I) and control area (C) reporting different defecation sites for men, women and children under 5 years, at baseline (January 1984)	21
Fig. 3.1	Progressive installation of handpumps ($n = 148$) and latrines ($n = 754$), and the phasing of the hygiene education interventions	24
Fig. 3.2	Design of double-pit latrine used in the Mirzapur project: isometric view	25
Fig. 3.3	Latrine design--Section A-A	26
Fig. 3.4	Latrine design--details of components	28
Fig. 5.1	Results of KAP surveys, showing changes in water source choice during the project period	39
